Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

DESCRIPTION:

The Pine Street Canal Superfund site is located on Pine Street in Burlington, Vermont, on the shores of Lake Champlain. The site consists of an abandoned barge canal and turning basin, surrounding vegetated wetlands, and upland areas. It is hydraulically connected to Lake Champlain and is subject to flooding from the lake. Currently, the majority of the site is vacant. Surrounding land uses include industrial, commercial, and residential. It is estimated from 1990 census data that 1,450 people reside within a half-mile radius of the site. The City of Burlington plans to encourage further economic development and recognizes that the site is a unique natural setting. It is expected that future land use will be recreation/open space in the wetland areas along the lakefront, and commercial use, and prohibiting its use for drinking water purposes. Municipal sources supply potable water for all businesses and residences in the City. Several industrial facilities near the site havedeep bedrock wells that supply process water. Wetlands comprise approximately 21 acres of the site and support a diversity of mammals, birds, reptiles and amphibians. The wetlands and canal receive stormwater runoff from the site and from three storm sewer culverts that drain a watershed of approximately 150 acres. The canal and turning basin are connected to Lake Champlain through a partially restricted outlet under the railroad trestle in the northwest corner of the site. The rest of the site consists of grassy covered open areas, scrub-shrub upland and forested upland. The site has been used for various industrial/commercial purposes since the mid-1800s, when the railroad on the western edge of the canal was built. The barge canal andturning basin were first dredged in 1868 to provide access to Lake Champlain for several lumber companies, a coal company, and a boat builder. By 1879, two slips for barges had also been constructed. Around 1895, Burlington Gas Works, a man

ufactured gas plant, was constructed near Pine Street. The Burlington Gas Works reportedly disposed of large quantities of coal gasification wastes, such a coal tar, fuel oil, cyanide, contaminated wood chips, iron oxide, cinders and metals at its former location along Pine Street and in the wetland areas behind the plant. These materials are the primary source of contamination at the site. The Vermont Agency of Transportation investigated the site from 1976-1988. In 1988, EPA took the lead for site investigation and broadened their scope. The result of EPA s work is documented in the 1992 Supplemental Remedial Investigation Report. EPA also completed a Baseline Risk Assessment Final Report and a Feasibility Study (FS) Report. Treatability studies were performed in 1992 as part of the FS. Under the oversight of EPA and the State, and with involvement by the members of the Pine Street Barge Canal Coordinating Council (PSBCCC), additional studies of the site were performed in 1994-1998. EPA notified Potentially Responsible Parties (PRPs) in 1987,1988, and 1992, and filed suit against three PRPs seeking reimbursement of costs incurred by EPA in undertaking a removal action in 1988. In 1990, EPA reached a settlement with the defendants. EPA and the State of Vermont issued an Administrative Order on Consent in 1994, and second Administrative Order on Consent in 1995, under which certain PRPs agreed to undertake an Additional Remedial Investigation (ARI) and Additional Feasibility Study (AFS), and to compensate EPA and the State of Vermont for the costs of oversight over the ARI and AFS. A Record of Decision was completed in September 1998.

(QR 11,			

purchased property with the direct help of the Pilot. (QR 9, 10/1/98-1/15/99) The Pilot completed and submitted redevelopment plans to the Burlington Planning and Zoning Department/Commission for the Flynn Avenue property and includes: the installation of a self-storage/truck rental facility. (QR 11, 4/1/99-7/30/99) Significant issues surround the completion of environmental work and zoning approval at the 199 Flynn Avenue property. The property is still undergoing cleanup and has a 36 foot culvert running through the middle of the property that carries potentially tainted runoff from local streets directly into the Lake. This property is adjacent to a residential neighborhood. The currently proposed self-storage/truck rental facility is not expected to be granted zoning approval due to the potential for negative impact on the quality of life for the local residents. (QR 11, 4/1/99-7/15/99) The developer cleanup activities, wetlands, and a culverted stream. The Pilot is researching the impact of the proposed development. This includes reviewing environmental plans; researching state law, city records, and records from a previous court case; providing data to a concerned citizen; working with Planning and Zoning on compliance issues; and exploring development alternatives. (QR 13, 10/1/99-12/31/99)

#### **DESCRIPTION:**

**Target Property:** 

PINE ST

The Pine Street Canal Superfund site is located on Pine Street in Burlington, Vermont, on the shores of Lake Champlain. The site consists of an abandoned barge canal and turning basin, surrounding vegetated wetlands, and upland areas. It is hydraulically connected to Lake Champlain and is subject to flooding from the lake. Currently, the majority of the site is vacant. Surrounding land uses include industrial, commercial, and residential. It is estimated from 1990 census data that 1,450 people reside within a half-mile radius of the site. The City of Burlington plans to encourage further economic development and recognizes that the site is a unique natural setting. It is expected that future land use will be recreation/open space in the wetland areas along the lakefront, and commercial use, and prohibiting its use for drinking water purposes. Municipal sources supply potable water for all businesses and residences in the City. Several industrial facilities near the site havedeep bedrock wells that supply process water. Wetlands comprise approximately 21 acres of the site and support a diversity of mammals, birds, reptiles and amphibians. The wetlands and canal receive stormwater runoff from the site and from three storm sewer culverts that drain a watershed of approximately 150 acres. The canal and turning basin are connected to Lake Champlain through a partially restricted outlet under the railroad trestle in the northwest corner of the site. The rest of the site consists of grassy covered open areas, scrub-shrub upland and forested upland. The site has been used for various industrial/commercial purposes since the mid-1800s, when the railroad on the western edge of the canal was built. The barge canal andturning basin were first dredged in 1868 to provide access to Lake Champlain for several lumber companies, a coal company, and a boat builder. By 1879, two slips for barges had also been constructed. Around 1895, Burlington Gas Works, a man

ufactured gas plant, was constructed near Pine Street. The Burlington Gas Works reportedly disposed of large quantities of coal gasification wastes, such a coal tar, fuel oil, cyanide, contaminated wood chips, iron oxide, cinders and metals at its former location along Pine Street and in the wetland areas behind the plant. These materials are the primary source of contamination at the site. The Vermont Agency of Transportation investigated the site from 1976-1988. In 1988, EPA took the lead for site investigation and broadened their scope. The result of EPA s work is documented in the 1992 Supplemental Remedial Investigation Report. EPA also completed a Baseline Risk Assessment Final Report and a Feasibility Study (FS) Report. Treatability studies were performed in 1992 as part of the FS. Under the oversight of EPA and the State, and with involvement by the members of the Pine Street Barge Canal Coordinating Council (PSBCCC), additional studies of the site were performed in 1994-1998. EPA notified Potentially Responsible Parties (PRPs) in 1987,1988, and 1992, and filed suit against three PRPs seeking reimbursement of costs incurred by EPA in undertaking a removal action in 1988. In 1990, EPA reached a settlement with the defendants. EPA and the State of Vermont issued an Administrative Order on Consent in 1994, and second Administrative Order on Consent in 1995, under which certain PRPs agreed to undertake an Additional Remedial Investigation (ARI) and Additional Feasibility Study (AFS), and to compensate EPA and the State of Vermont for the costs of oversight over the ARI and AFS. A Record of Decision was completed in September 1998.

### **Environmental FirstSearch Descriptions**

**NPL:** *EPA* NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money.

A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

FINAL - Currently on the Final NPL

PROPOSED - Proposed for NPL

**NPL DELISTED:** *EPA* NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DELISTED - Deleted from the Final NPL

**CERCLIS:** *EPA* COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

PART OF NPL- Site is part of NPL site

DELETED - Deleted from the Final NPL FINAL - Currently on the Final NPL NOT PROPOSED - Not on the NPL NOT VALID - Not Valid Site or Incident PROPOSED - Proposed for NPL

REMOVED - Removed from Proposed NPL

SCAN PLAN - Pre-proposal Site

WITHDRAWN - Withdrawn

**NFRAP:** *EPA* COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

NFRAP – No Further Remedial Action Plan

- P Site is part of NPL site
- D Deleted from the Final NPL
- F Currently on the Final NPL
- N Not on the NPL
- O Not Valid Site or Incident
- P Proposed for NPL
- R Removed from Proposed NPL
- S Pre-proposal Site
- W-Withdrawn

**RCRA COR ACT:** *EPA* RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. RCRAInfo facilities that have reported violations and subject to corrective actions.

RCRA TSD: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM

TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

Facilities that treat, store, dispose, or incinerate hazardous waste.

RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM RCRA GEN: EPA GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that generate or transport hazardous waste or meet other RCRA requirements.

LGN - Large Quantity Generators

SGN - Small Quantity Generators

VGN - Conditionally Exempt Generator.

Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

Federal IC / EC: EPA BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs.

FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either an engineering or an institutional control. The data includes the control and the media contaminated.

ERNS: EPA/NRC EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: DOI/BIA INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation.

State/Tribal Sites: VT DEC ACTIVE AND CLOSED HAZARDOUS SITES LIST - database of active and closed hazardous waste sites. The data includes priority, project status, source, date of site discovery, date of site closure, and owner information.

State Spills 90: VT DEC VERMONT SPILLS DATABASE - database of spills reported to the Vermont Department of Environmental Conservation. The data includes information regarding incident date, type of incident, reporter, responsible party, and action taken.

State/Tribal SWL: VT DEC SOLID WASTE MANAGEMENT FACILITIES LIST - database of both landfills and transfer stations for the state of Vermont. The list includes contact information for each site.

State/Tribal LUST: VT DEC PULLED UNDERGROUND STORAGE TANKS LIST - database of tanks that have been pulled/removed due to a leak. Under state law any tank that has reported a leak must be pulled/removed. The data includes owner and operator name, facility type, and tank information.

State/Tribal UST/AST: VT DEC REGISTERED UNDERGROUND STORAGE TANKS LIST - database of underground storage tanks registered with the Vermont Department of Environmental Conservation. The data includes facility type, owner contact information, and tank substance, protection, and capacity.

**State/Tribal Brownfields:** *VT ANR* BROWNFIELD SITE LIST - database of sites that have been classified as Brownfields and/or have Institutional Controls. Information regarding size, response action, cleanup type, and project manager is included.

Brownfields Management System (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various brownfield grant programs.

**Receptors:** *US DOC* SENSITIVE RECEPTORS - 2005 Census Bureau's TIGER (Topologically Integrated Geographic Encoding and Referencing System) database of schools and hospitals. List of schools and hospitals that may house individuals deemed sensitive to environmental discharges due to their fragile immune systems.

**RADON:** *NTIS* NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

**State Other:** *US DOJ* NATIONAL CLANDESTINE LABORATORY REGISTER - Database of addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the U.S. Department of Justice ("the Department"), and the Department has not verified the entry and does not guarantee its accuracy. All sites that are included in this data set will have an id that starts with NCLR.
